No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (222 Rosewood Drive, Danvers, Massachusetts 01923), for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1994 articles are as shown on the article title pages; if no fee code appears, the copy fee is the same as for current articles.

This journal is printed on acid-free paper.

CONTENTS OF VOLUME 166

NUMBER 1, JULY 1994

D. BAILLY. $^{12}C^{16}O_2$ in Emission in the 4.5-μm Region: Some More Rovibrational Transitions $v_1v_2'v_3 \rightarrow v_1v_2'(v_3 - 1)$ Occurring between Very Few Populated Levels 1

WŁODZIMIERZ KOŁOS AND JACEK RYCHLEWSKI. The $f^3\Sigma_u^+$ State of the Hydrogen Molecule 12

A. LEVY, N. LACOME, AND G. TARRAGO. Temperature Dependence of Collision-Broadened Lines of Phosphine 20

Z. KISIEL AND L. PSZCZÓŁKOWSKI. The Millimeter-Wave Rotational Spectrum of 2-Chloroacrylonitrile 32

A. HENRY, A. VALENTIN, M. MARGOTTIN-MACLOU, AND F. RACHET. Tunable Diode Laser Spectrometer with Controlled Phase Frequency Emission .. 41

LI-HONG XU. Fourier Transform Spectroscopy of $^{13}CD_3OH$ Methanol: *a*-Type Spectrum in the 14–50 cm^{-1} Range 56

M. HEPP, I. PAK, K. M. T. YAMADA, ERIC HERBST, AND G. WINNEWISSER. Diode Laser Study of the Rotational Redistribution in CH_3OH during a Supersonic Jet Expansion 66

F. RACHET, M. MARGOTTIN-MACLOU, M. EL AZIZI, A. HENRY, AND A. VALENTIN. Linestrength Measurements for the $30^00 \leftarrow 02^00$, $10^01 \leftarrow 01^10$, and $13^10 \leftarrow 00^00$ Transitions of $^{14}N_2{}^{16}O$ (2600–3100 cm^{-1}) 79

I. HADJ BACHIR, H. BOLVIN, C. DEMUYNCK, J. L. DESTOMBES, AND A. ZELLAGUI. High-Resolution Optogalvanic Spectrum of N_2^+ Using a Ti:Sapphire Laser: The (2,0) Vibration Band of the Meinel System $A^2\Pi_u - X^2\Sigma_g^+$ 88

T. L. TAN, E. C. LOOI, K. T. LUA, A. G. MAKI, J. W. C. JOHNS, AND M. NOËL. FTIR Spectrum of the ν_2 Band of Deuterated Nitric Acid (DNO_3) 97

I. MUKHOPADHYAY. Assignments and Predictions of Optically Pumped Far-Infrared Laser Lines in [^{13}C]Methanol and Associated High-Resolution Spectra 107

J. C. PEARSON, K. V. L. N. SASTRY, ERIC HERBST, AND FRANK C. DE LUCIA. The Millimeter-Wave and Submillimeter-Wave Spectrum of Propylene (CH_3CHCH_2) 120

D. GUERIN, M. NISCHAN, D. CLARK, V. DUNJKO, AND A. W. MANTZ. Low-Pressure Measurements of Self and Air Broadening Coefficients in the ν_2 and ν_5 Bands of $^{12}CH_3F$ 130

O. N. BIGNALL, R. H. HUNT, AND W. N. SHELTON. Investigation of the Torsion–Rotation Energy Levels of the CH_3 Asymmetric Stretches in Methanol .. 137

12 813HI XL
12/94 31249-200 1782

J. DEMAISON, R. BOCQUET, W. D. CHEN, D. PAPOUSEK, D. BOUCHER, AND H. BÜRGER. The Far-Infrared Spectrum of Methyl Chloride: Determination and Order of Magnitude of the Sextic Centrifugal Distortion Constants in Symmetric Tops 147

DUANE OLSON, JAMES CEDERBERG, PETER SOULEN, HUNG TON, KARI URBERG, AND BRYAN MOCK. Lineshape Analysis of Second-Order Molecular Beam Transitions 158

ALEXANDER D. BYKOV, OLGA V. NAUMENKO, LEONID N. SINITSA, BRENDA P. WINNEWISSER, MANFRED WINNEWISSER, PAUL S. ORMSBY, AND K. NARAHARI RAO. The Hot Band $\nu_1 + 2\nu_2 + \nu_3 - \nu_2$ of $D_2{}^{16}O$ 169

ROBERT A. TOTH. Measurements of $H_2{}^{16}O$ Line Positions and Strengths: 11 610 to 12 861 cm^{-1} 176

ROBERT A. TOTH. The ν_1 and ν_3 Bands of $H_2{}^{17}O$ and $H_2{}^{18}O$: Line Positions and Strengths 184

J.-M. FLAUD, PH. ARCAS, C. CAMY-PEYRET, H. BÜRGER, AND H. WILLNER. Line Intensities in the ν_2 Band of $H_2{}^{80}Se$ 204

P. DRÉAN, M. LE GUENNEC, J. C. LÓPEZ, J. L. ALONSO, J. M. DENIS, M. KREGLEWSKI, AND J. DEMAISON. Rotational Spectrum, Molecular Constants, Dipole Moment, and Internal Rotation in Vinylphosphine 210

A. PERRIN, J.-M. FLAUD, C. CAMY-PEYRET, B. P. WINNEWISSER, S. KLEE, A. GOLDMAN, F. J. MURCRAY, R. D. BLATHERWICK, F. S. BONOMO, AND D. G. MUIRCRAY. First Analysis of the $3\nu_9 - \nu_9$, $3\nu_9 - \nu_5$, and $3\nu_9 - 2\nu_9$ Bands of HNO_3: Torsional Splitting in the ν_9 Vibrational Mode 224

JOURNAL OF MOLECULAR SPECTROSCOPY

INFORMATION FOR AUTHORS

Manuscripts describing original work in areas of molecular spectroscopy should be submitted to K. Narahari Rao, Department of Physics, The Ohio State University, Columbus, Ohio 43210.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Molecular Spectroscopy* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. As in the past, the Publisher will continue to grant all reasonable requests for permission to reproduce material from contributions appearing in the Journal. However, it is recommended that such requests be first made to the Editor for appropriate action.

Form of Manuscripts. Manuscripts in duplicate should be typewritten with wide margins on high-quality bond paper using double or triple spacing throughout. Copies should include figures, tables, etc.

Each page of the manuscript should be numbered. The first page should contain the article title, author's name, and affiliation. At the bottom of this page, the number of manuscript pages, figures, and tables should be noted. The second page should contain a proposed running head of less than thirty-five characters. It should also contain the name and complete mailing address of the person to whom proofs are to be sent. The third page should contain an abstract.

"Letters to the Editors" will be devoted to the announcement of important results with a minimum of delay. "Notes" will also be published as speedily as possible. Contributions to this section containing "Letters to the Editors" and "Notes" should not exceed 1½ printed pages, including figures, equations, and tables. They should follow the style and form used for manuscripts except that they need not be accompanied by abstracts.

List of Symbols. Authors should submit a complete list of symbols identifying each for the printer. This list will not appear in print.

Tables. Tables are to be numbered consecutively with Roman numerals. The table numbers and titles should be listed on a separate sheet. *Tables will be reproduced as camera-ready copy.* Therefore, they should be carefully and clearly typed since, except for reduction in size, they will appear exactly as submitted. If the tables will be prepared using a word processor or computer, it is recommended that a daisy wheel printer be used. If a daisy wheel printer is unavailable and you will be using a dot matrix printer, it is important that the density of the dots (i.e., the number of dots in the matrix) be sufficient that the numbers do not appear broken. Short tables of one or two pages in length should be typed double-spaced and planned to fit an area of 5 × 8¼ in. after reduction of no more than 40%. Lengthy tables should be typed single-spaced and divided into sections so that each section can fit in the area indicated. *Repeat column headings when dividing tables.* No corrections can be inserted after the line cuts have been made. Do not use a comma to separate groups of 3 digits; merely use a space. For instance: 2,526,000 should be typed 2 526 000. Insert a zero in front of a decimal point when it applies. For instance, instead of .36, use 0.36.

Footnotes to tables should be identified by superscript letters and placed at the bottom of the page containing the table. Footnotes in the text should be identified by superscript numbers and listed consecutively on a separate page.

Equations. Equations should be numbered consecutively with the number placed in parentheses to the right of the equation. Reference to equations should use the form Eq. (3).

References. References should be cited in the text by underlined number in parentheses (in order of appearance). The literature cited should appear on a separate page (double-spaced) and should be listed consecutively according to reference number. Following the reference number, the author's initials, last name, journal name, volume, inclusive pagination, and year (in parentheses) should be listed in that order. Abbreviations of journal names should follow the style of *Chemical Abstracts Service Source Index,* 1985. For book references give the author's name, name of book, editor's name (if any), edition (if other than first), chapter or page number, publisher's name, place, and year of publication.

Figures. All illustrations should be numbered as figures in sequence with Arabic numerals. Each figure should have a descriptive legend and these should be listed on a separate sheet. Figures should be planned to fit the proportion of the printed page (5 × 8¼ inches), and care should be taken that lettering on the original is large enough to be legible after a reduction of 50 to 60 percent. Illustration copy should measure no larger than 12 × 15 inches. Each figure should be identified in a margin with the name of the journal, author's name, and figure number. Photocopies of figures are not acceptable. Illustrations in color can be accepted only if the authors defray the cost.

Proofs. Proofs will be sent to the author, with reprint order forms. Fifty reprints of each article are granted free of charge, and additional copies may be purchased. Authors will be charged for excessive alterations.

Personal Computer Disks. Manuscripts may be submitted to *Journal of Molecular Spectroscopy* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular material and art must also be prepared as camera-ready copy; see the sections on Tables and Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing disks for typesetting conversion, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, Inc., 525 B Street, Suite 1900, San Diego, California 92101-4495; telephone: (619) 699-6415; fax: (619) 699-6800).
